EndoPredict[®]

Patient Guide

- EndoPredict is India's no.1 Breast Cancer Recurrence test
- 2 out of 3 patients undergoing EndoPredict avoid chemotherapy
- EndoPredict is a test from Myriad Genetics, USA which is world's largest cancer genetic testing company present in 150+ countries

EndoPredict[®]

Chemotherapy: Unnecessary evil in Breast Cancer

Chemotherapy can be hugely discomforting. Chemotherapy also destroys normal cells in your blood, mouth, intestinal tract, nose, nails, vagina, and hair.

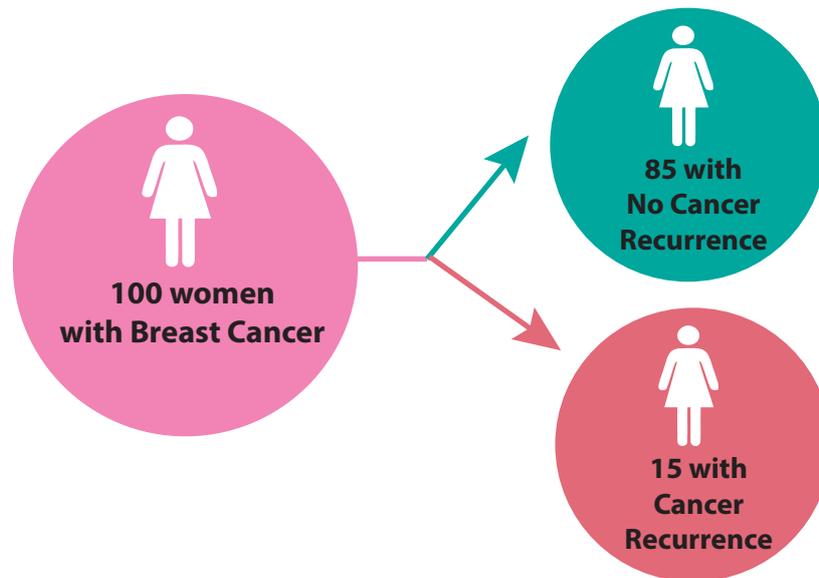

Common side effects of Chemotherapy includes:

- Hair Loss
- Pain
- Mouth and throat sores
- Weight Changes
- Fertility issues
- Nausea and vomiting
- Infection
- Neuropathy
- Memory loss
- Vaginal dryness

Why you should consider EndoPredict to avoid Chemotherapy?

Early Breast Cancer

- After breast cancer surgery most patients never get back cancer even if they dont take Chemotherapy
- Its difficult to determine in which patient cancer will come back and in which it wont based only on clinical evaluation
- Genetic markers in tumor decides its aggressiveness and thus can help pinpoint patients most likely to face the disease again

**EndoPredict helps avoid chemotherapy
in 2 out of 3 patients**

EndoPredict[®]

India's #1 best selling Breast Cancer Recurrence test

What is EndoPredict?

- EndoPredict is a gene expression test that will help patients with breast cancer to determine the best treatment option for their cancer
- EndoPredict accurately determines the likelihood of cancer coming back in 10 years
- It helps to avoid chemotherapy in 2 out of 3 patients

How it works?

- EndoPredict analyzes the activity of 12 genes that can influence how likely a cancer is to grow and respond to treatment
- Score of 12 genes gives EP score which is combined with tumour size and nodal status to come with final EPclin score

EndoPredict helps by knowing

- Whether you need chemotherapy or not
- Chances of Breast Cancer coming back in 10 years

You should take EndoPredict if

- You've recently been diagnosed with Breast Cancer
- The cancer is estrogen-receptor-positive and HER2 negative
- You are making decisions about chemotherapy

The following tables provide general guidelines for interpreting your EndoPredict score. Your doctor will help you understand the meaning of your results.

Score	Meaning
EndoPredict Low Risk	The breast cancer has a low risk of recurrence with hormonal therapy. The benefit of chemotherapy is likely to be small and will not outweigh the risks of side effects.
EndoPredict High Risk	The breast cancer has a high risk of recurrence with hormonal therapy, and the benefits of chemotherapy are likely to be greater than the risks of side effects.

2 out of 3 patients can avoid Chemotherapy

EndoPredict Patient Stories

- A breast cancer diagnosis is a difficult time for a patient and their loved ones, and treatment decisions are not always easy to make. During the breast cancer treatment process, patients face many options and can benefit from support and insight from those who have traveled this path before them
- Read the very personal perspective from different patients on how they made their individual breast cancer treatment decision

I was afraid of losing my hair to chemotherapy. My doctor advised me to take EndoPredict to determine whether i need chemotherapy or not. EndoPredict revealed that i fall in low risk category and i can be safely treated with hormonal treatment alone. I was relieved to avoid chemotherapy.

- Neha, 40

EndoPredict helped me avoid Chemotherapy side effects and unwanted cost of treatment.

- Waheeda, 65

Having to undergo chemotherapy - that is a horrible experience that I would never wish on a woman. Your hair falls out, your blood count is unstable, and for months and months you feel miserable all the time. In addition, I do not know what long-term damage the chemotherapy may do to me. Ofcourse, you want to take any therapy if it really helps! That's why, in my opinion, it's good that there is now a test that might spare us breast cancer patients from having to undergo unnecessary chemotherapy.

- Simran, 54
